NEUROINSIGHTS BY NEUROLOGY CARE

EXPERT'S CORNER

Our Neurology Care team proudly consists of six dedicated providers. United by a commitment to excellence and patient-centered treatment, our providers collaborate closely, ensuring a holistic approach to diagnosis, management, and rehabilitation. Built on empathy and a passion for enhancing patient lives, our practice stands as a beacon of trusted neurological care within our community.

PATIENT STORIES

“Very pleasant staff and funny. Dr. Was calming and was laughing and joking with me. He was very smart to. Knew exactly the place in my back were my nerve was pinched. It's all about your attitude and perspective.”

PARKINSON'S AWARENESS MONTH

Parkinson's disease occurs when some of the nerve centers in the brain lose the ability to regulate muscle movements. As a result, you may have rigid muscles, tremors, and trouble walking and swallowing. Parkinson's disease is one of the most common diseases affecting movement in people over age 55. It is chronic, meaning you will have it the rest of your life. It also is progressive, which means the symptoms grow worse over time. The disease may become disabling after many years. However, proper treatment should make it possible for you to lead a fulfilling, productive life.

Did you know? Parkinson's disease is that it's named after James Parkinson, the British physician who first detailed its symptoms in 1817. Not just a physician, Parkinson was also a paleontologist, making his mark in multiple fields.
