NEUROINSIGHTS BY NEUROLOGY CARE

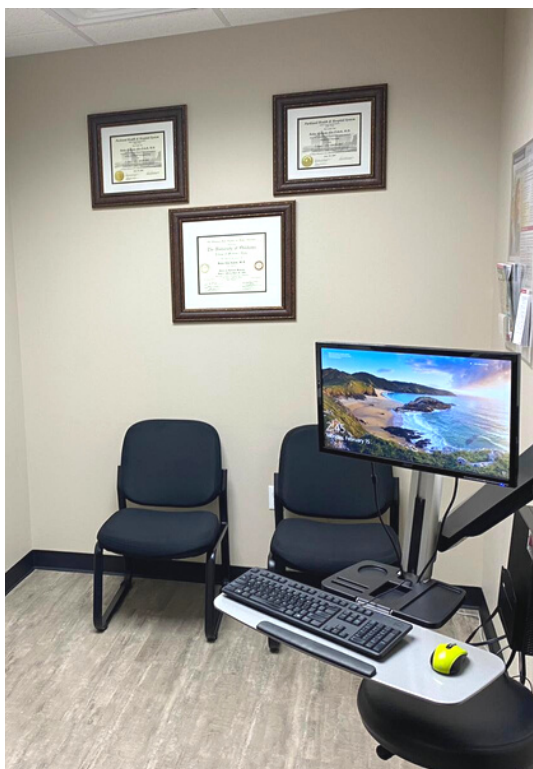

EXPERT'S CORNER

Our Neurology Care team, with six dedicated providers, offers comprehensive services for brain and nervous system health. Specializing in diagnosing and treating neurological disorders, we provide personalized care plans for chronic conditions, ensuring expert guidance on brain, spinal cord, and peripheral nerve issues.

PATIENT STORIES

"Best place to go!! Always willing to fit you in when needed. Always answer any questions you have and make sure you are taken care of. Amazing staff!!"

"Caring and very professional team of Nurses, Dr and staff."

SETTING THE FOUNDATION FOR NEUROLOGICAL WELL-BEING

Embarking on a neurological journey is a distinctive experience that requires both comprehension and proactive measures. It goes beyond simply facing challenges; it involves delving deeply, understanding with clarity and compassion, and ensuring you are armed with the appropriate knowledge.

Did you know? EMG stands for electromyography, a diagnostic procedure measuring the electrical activity of muscles. Electrodes are placed on the skin or needles inserted into muscles to detect and record muscle cell signals during contraction and at rest. EMG is used to diagnose nerve and muscle disorders, evaluate causes of weakness or paralysis, and assist in treatment planning. Results are interpreted alongside other clinical information in a comprehensive neurological examination.
